Network Security

Your Greatest Threat May Come from Within

In the age of HIPAA, SOX, and PCI, every company needs a security policy that controls data access for users. In today's networked environment, there are hundreds of ways to access your IBM i® data, making a security breach more likely than ever before. It doesn't take malicious hackers to be at risk; the majority of security breaches are caused accidentally by people within your company.

Reduce the Risk of Security Breaches

Protect your organization from the high cost and negative publicity of security breaches by tracking, monitoring, and controlling access to your data. Be sure that you know who accessed what, when it happened, and how they got there. Network Security safeguards your IBM i by using exit programs that allow only the people that you have authorized to download or upload data.

Assure Secure Data Access

Access control is vitally important to protect an organization, yet authorized data access is essential for day-to-day operations. Partial solutions, such as shutting down specific servers, can hinder an organization's ability to compete in today's high-tech business world.

Quickly Change and Implement Access Rules

Network Security makes changing access rules simple. Administrators can limit access to the users or groups with a demonstrated need. Specific objects and libraries can be restricted, and rules can be assigned by IP address. This allows you to limit system access to only the locations approved by policy.

Track and Log Activity

When security events occur on your system, Network Security can notify you in real time. Satisfy regulatory initiatives by recording transactions to a secure journal. Analyze this data with Microsoft Excel or other tools.

PRODUCT SUMMARY

KEY FEATURES

- Network access control and monitoring
- Transaction recording options
- Real-time notifications
- Dynamic access rules
- Graphical reporting
- Advanced filtering and search functionality
- Customizable dashboards
- Mobile-enabled design
- Browser interface
- Multiple levels of access control

User-Friendly Browser Interface

In addition to the familiar green screen, Network Security includes a browser interface with time-saving filtering and search functionality. Dashboards provide an up-to-the-minute view of transactions on your system without running reports. The mobile-enabled, responsive design allows you to monitor performance indicators and select rules even on mobile devices.

Network Security delivers the best performance in the market. It supports the high-volume transaction processing that is typical in today's Enterprise Resource Planning (ERP), retail, and financial applications.
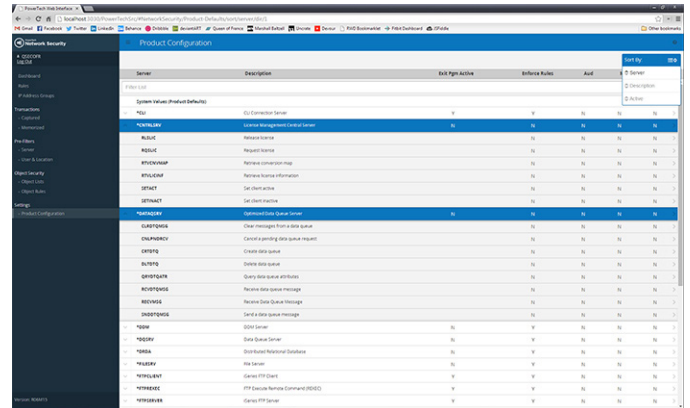

Save time finding rules by using the browser interface's filtering and search capability.

Let's Get Started

Call us at **800-328-1000** or email info.powertech@helpsystems.com to schedule a free demo. We'll review your current setup and see how PowerTech products can help you achieve your security and compliance goals.
