

DATASHEET

SEQUEL | True Data Empowerment

Discover Easy-to-Use, Modern Data Access and Analysis for IBM i

Queries: SEQUEL is perfect for either ad hoc requests or views used on a day-to-day basis with a user-friendly interface.

On-Demand End User Access: SEQUEL requests can be run with the click of an icon and/or with run-time prompts to facilitate end user access.

Dashboards: Summarize important business metrics on SEQUEL executive dashboards.

Drill-Down Analysis: Analyze data more effectively by moving from summary information to detailed data.

Summarize with Pivot Tables: Organize and categorize large volumes of data in seconds using Tabling views.

Email/FTP Delivery: Use ESEND to distribute downloaded files or spooled file reports easily via email or FTP.

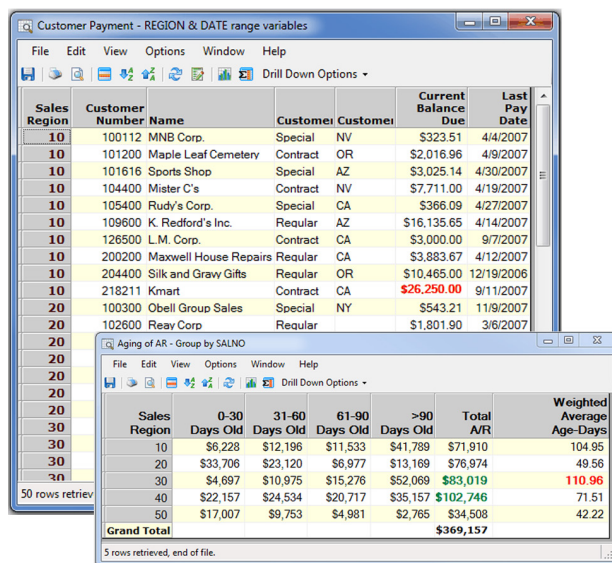

Reporting: Design reports for your IBM i or PC printer output.

Multi-Platform Access: From a central IBM i server, use SEQUEL to access data from remote databases, including: DB2,[®] ORACLE,[®] MySQL,[®] Microsoft SQL Server,[®] and others.

Secure Web Access: View information from anywhere using a PC-based web browser or mobile device and the SEQUEL Web Interface.

Data Warehousing: Build and support high-performance, high-integrity data warehouse environments.

Download Data: Use one simple step to open, convert, or download data into Excel[®] and other popular PC file formats.

You can export results from SEQUEL ViewPoint[®] directly to Excel and other file formats. Simple formatting options make it easy to highlight data with Key Performance Indicators (KPIs).

Modernize Your Data Access and Analysis

SEQUEL provides true data empowerment with flexible, affordable business intelligence. SEQUEL is the solution for virtually all of your data access needs.
